DETAILED ACTION

Response to Amendment

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 39-56 are rejected under 35 U.S.C. 102(b) as being unpatentable by ***Webster, Jr*** (US 5,626,136).

Claims 39-41, 43-50, and 52-56: Webster discloses of all claimed inventions in claims 39-41, 43-50 and 52-56. Webster discloses of catheter for mapping and/or ablation (col. 1, lines 30-56; col. 2, lines 1-21) where it includes elongated catheter body with proximal and distal sections with distal section includes a distal segment, a curvable or bendable proximal segment, and a bendable or flexible intermediate segment placed in between the distal segment and the proximal segment (col. 3, line 30 – col. 4, line 8). The first deflecting section bends the distal segment through the intermediate segment and the second deflecting section bends the proximal segment along a first axis as shown in figure 1a. Furthermore, the catheter body is bendable but incompressible (col. 3, lines 38-45). The angle and direction of deflection of one bendable section to another is independent and the degrees of bending section ranges from zero to 360 degrees.

Claims 42 and 51: Webster also discloses in figure 1B, where the deflection points in the catheter's distal and proximal sections includes three or more deflection points (col. 4, lines 9-32).
